WATTS' GIANT POLYANTHUS-PRIMROSES.

*As supplied to H.M. Office of Works for
the Royal Gardens and the London Parks.*

FIRST CLASS CERTIFICATE NATIONAL AURICULA & PRIMULA SOCIETY.

These lovely Spring Flowers, so fragrant, so easily grown, and coming into bloom at a time when hardy flowers are scarce, should be in every garden; they are invaluable for bedding, for borders and shrubberies, and for cutting. This strain is the result of years of careful selection and cross fertilization.

The seeds may be sown at any time in the Spring or Summer, but early sowing is necessary if plants are to flower the following Spring. The little seedlings, which should appear in about three weeks from the time the seed is sown, may be pricked out as soon as they are large enough to handle, and in due time planted where they are to flower; they will grow in almost any soil or situation, but do best in a good loamy soil deeply worked and well prepared, where they are sheltered from rough winds in Winter and from too much sun in Summer. If left undisturbed for two or three years, they make a glorious show.
